Viroc® Cement Bonded Particle Board

PT

O Viroc é um painel compósito constituído por uma mistura de partículas de madeira e cimento.

Combina a flexibilidade da madeira com a resistência e durabilidade do cimento, permitindo uma vasta gama de aplicações tanto no interior como no exterior.

A sua aparência não é homogénea, sendo uma característica natural do produto.

Pode ser calibrado/lixado (para aplicações que exigem menores tolerâncias). Uma vez calibrado, apresenta partículas de madeira visíveis na superfície do painel.

ES

Viroc es un panel de madera y cemento. Un material composite, formado por una mezcla de partículas de madera y cemento comprimido y seco.

Combina la flexibilidad de la madera con la resistencia y durabilidad del cemento, lo que permite una amplia gama de aplicaciones, tanto en interiores como exteriores.

Su apariencia no es homogénea, lo que constituye una característica natural del producto.

Puede calibrarse/lijarse (para aplicaciones que exigen menores tolerancias). Una vez calibrado, presenta partículas de madera visibles en la superficie del panel.

FR

Le Viroc est un matériau composite, composé d'un mélange de particules de bois et de ciment comprimé et sec.

C'est un panneau qui associe la flexibilité du bois à la résistance et la durabilité du ciment. Il permet donc une vaste gamme d'applications aussi bien en intérieur qu'en extérieur.

Il présente, de par ses caractéristiques naturelles, un aspect qui n'est pas homogène.

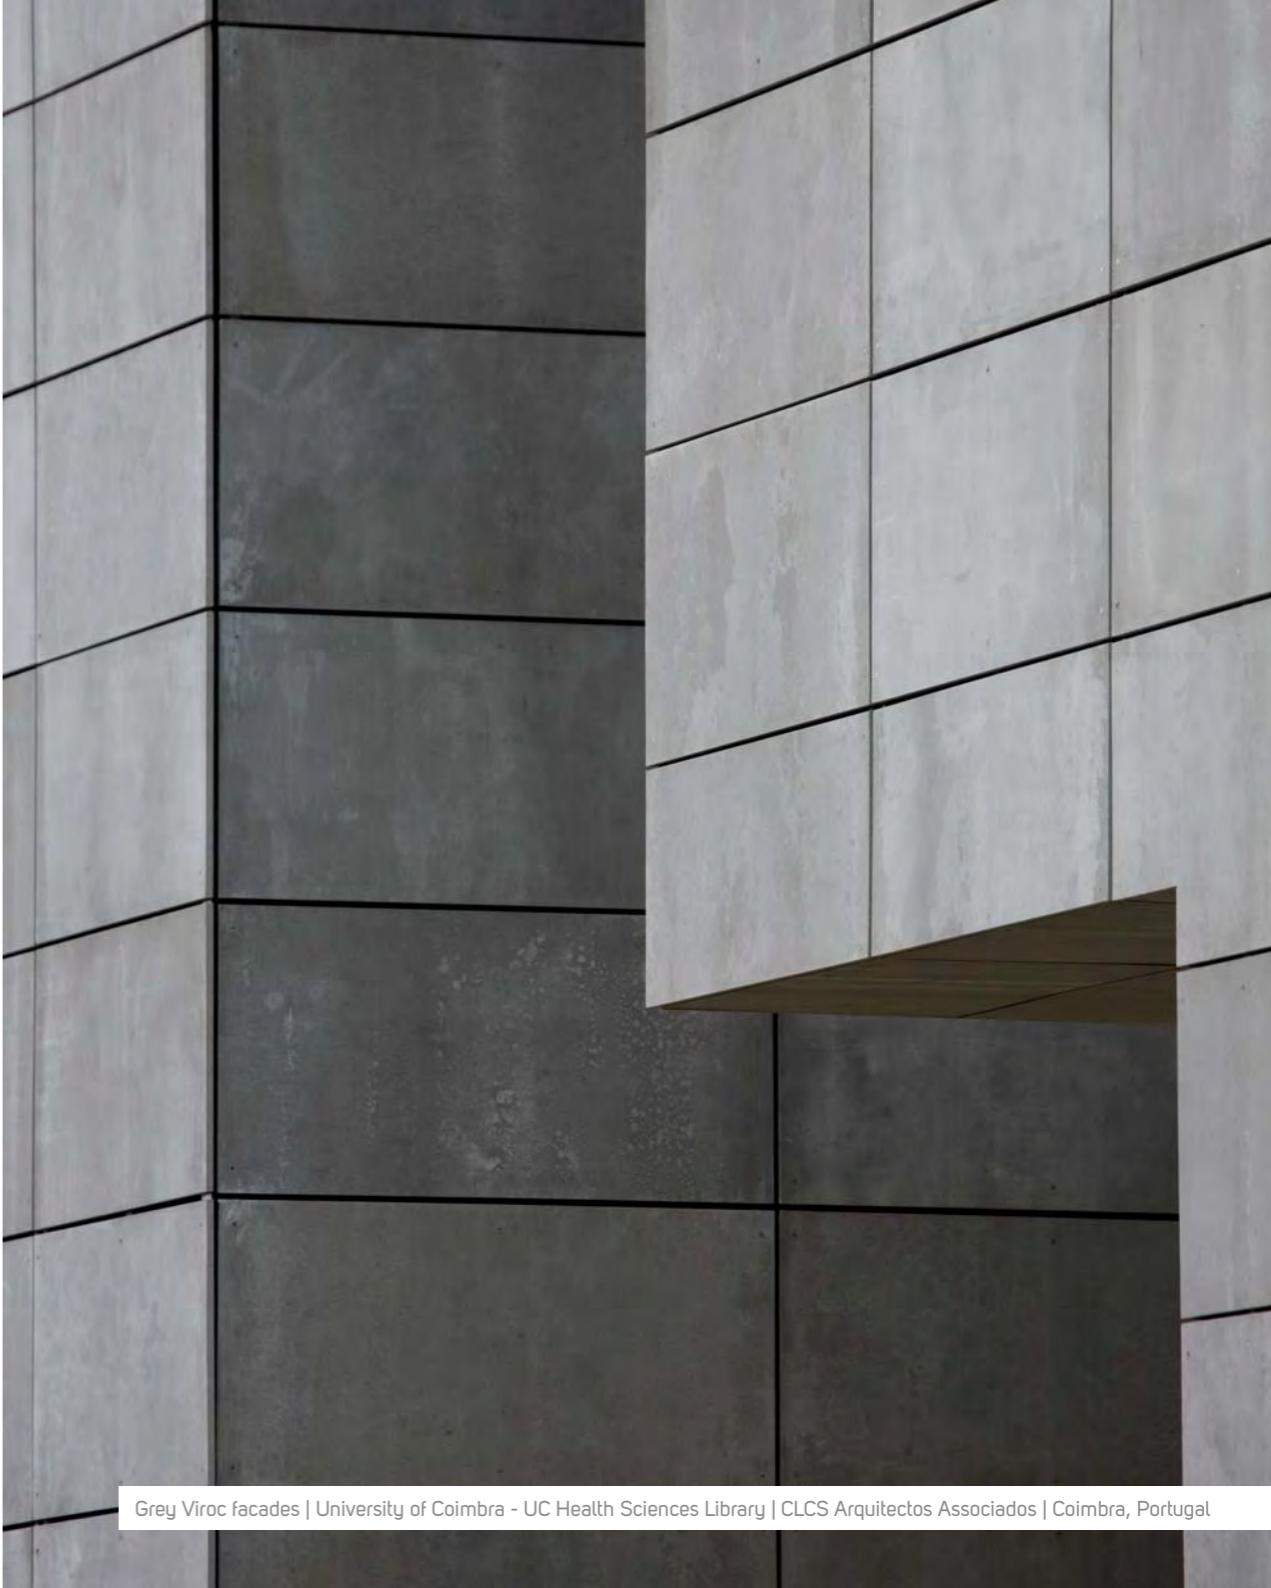

Il peut être calibré/poncé (pour des applications qui requièrent des tolérances plus faibles). Une fois calibré, les particules de bois restent visibles sur la surface du panneau.

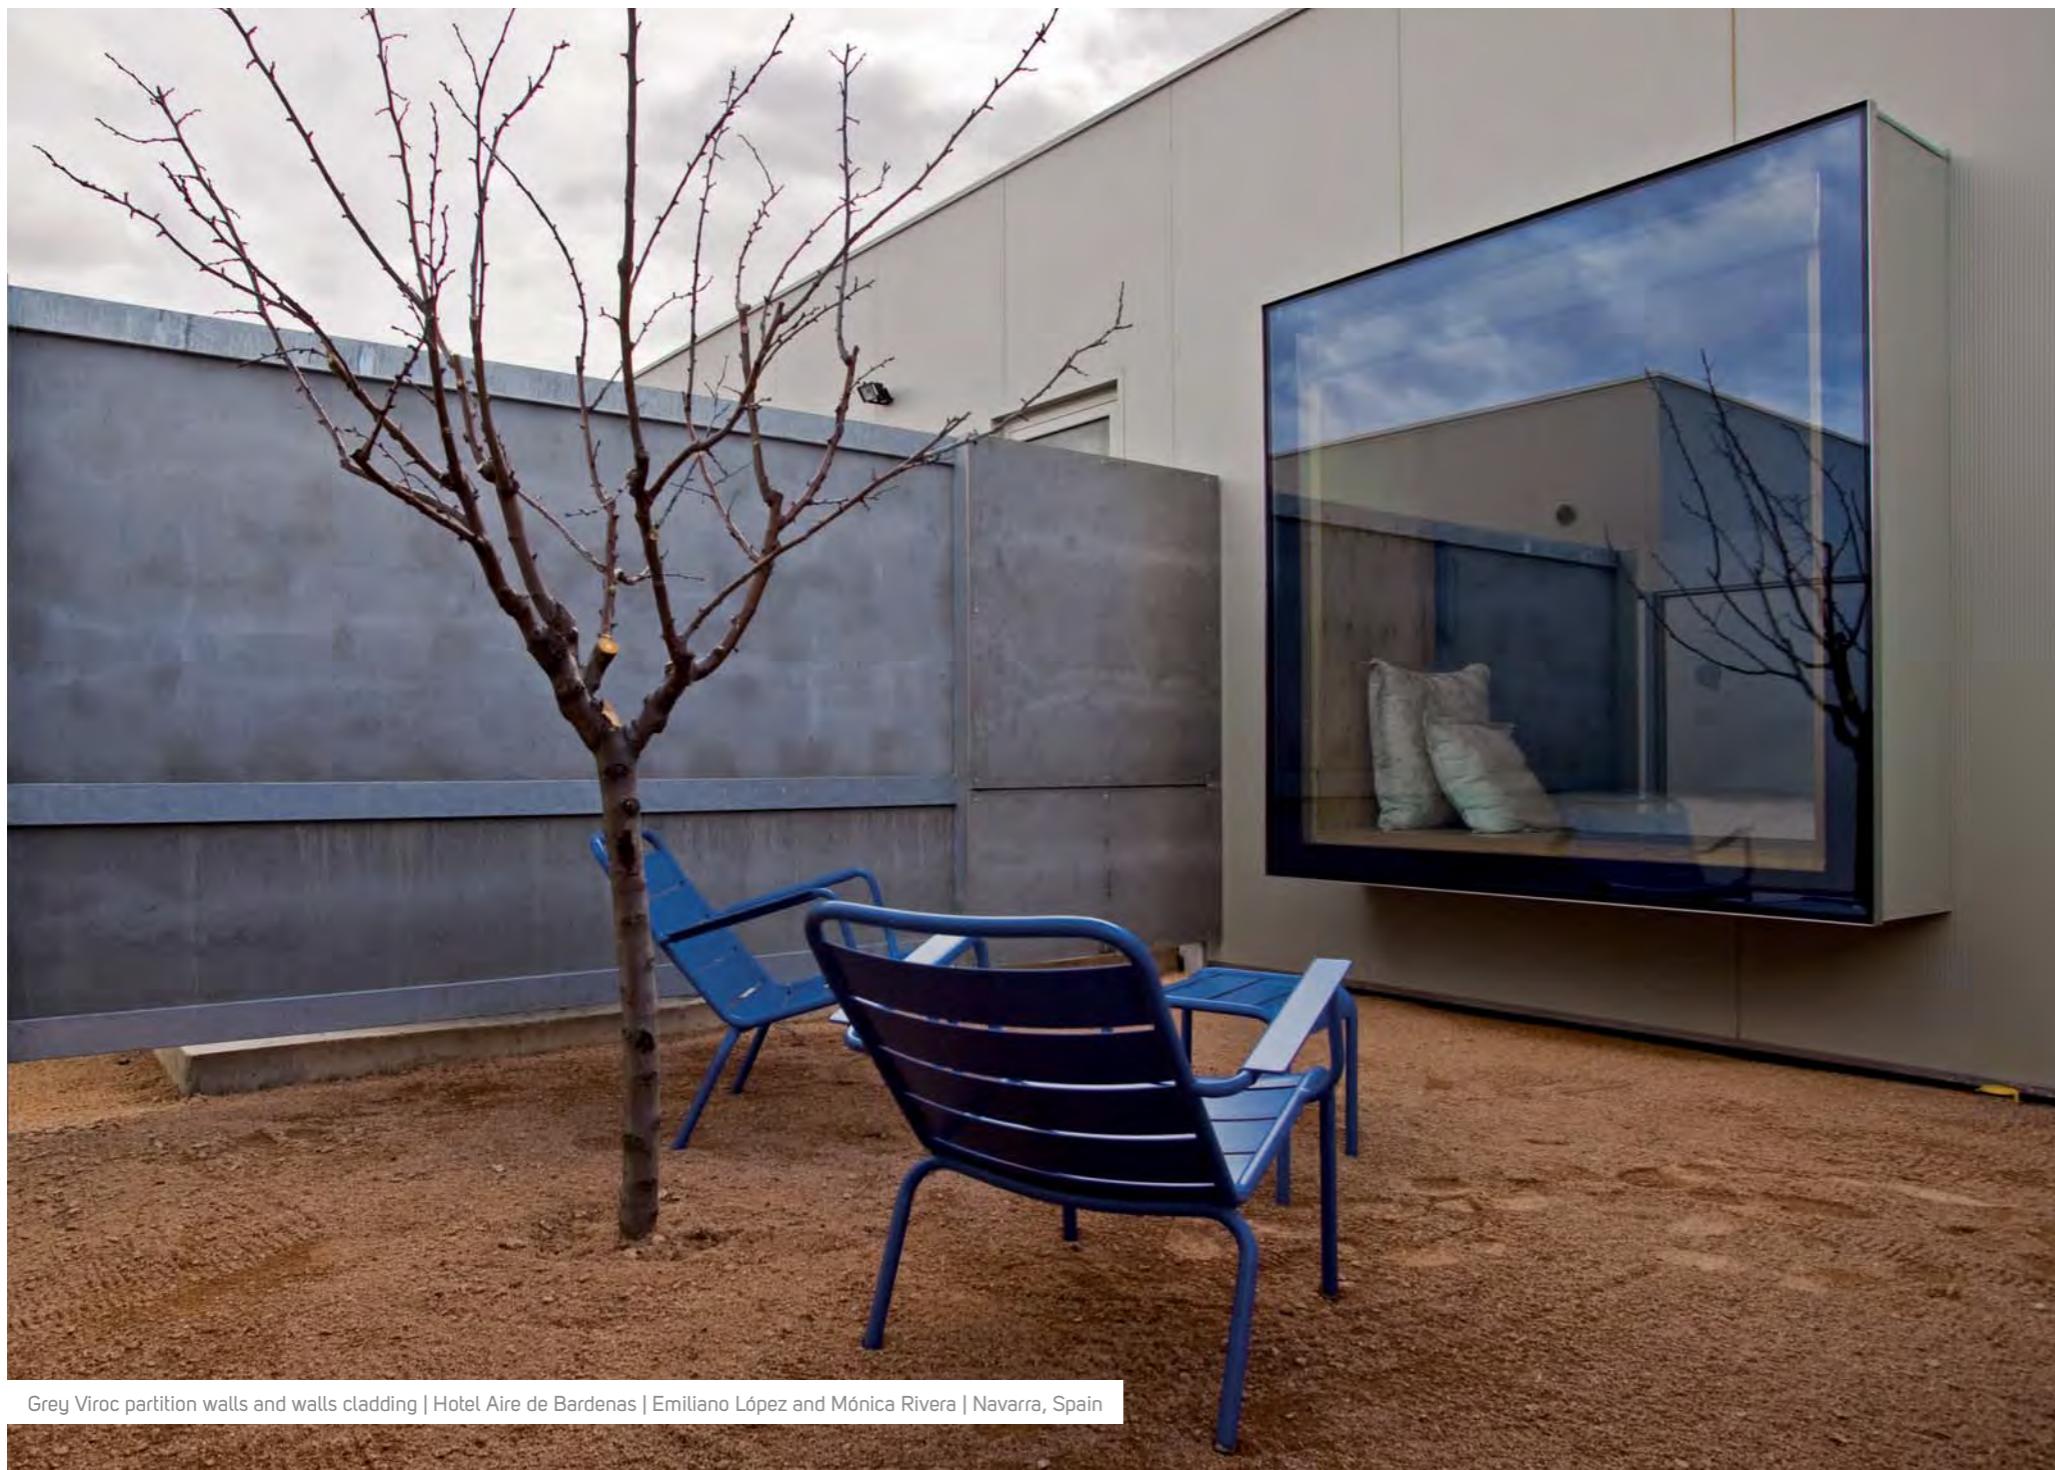

Viroc is a composite material, composed by a compressed and dry mixture of pine wood particles and cement.

It combines the flexibility of wood with the strength and durability of cement, allowing a large range of applications, both indoor and outdoor.

Viroc presents a non-homogeneous appearance, a product natural feature.

Viroc can be factory calibrated/sanded (for applications requiring tighter tolerances). Once calibrated, presents visible wood particles on the surface.
